and the idiots in washington probably would not stop chinaif they did buy farm land---- they now want to give china; on cd-rom patents for the last 160 years; and HR 3460 will open the doors to that; also any idea could be copied after 18 months no matter if a patent is issued or not

interesting thought on CHINA; with 70% of our money in foriegn hands-----maybe that is one way of getting some of it back; chinese money is not accepted in many countries thus they use our \$\$\$ to make purchases from other countries japan also made other investments here besides real eatate and art; many of our industries here are japoanese owned; FIRESTONE TIRES for one---7-11 i have a long list of "AMERICAN" companies they control but would be intersting if they purchased farmland here

Japan used its massive profits from the U.S. to buy up real estate, golf courses and art. China's smarter. They'll use their \$40,000,000,000+ annual surplus to buy up our farmland. Think of the implications...
